

Unleash your *speed*

What meet managers need to know about

TritonWear Meet Eligibility

Gain a deeper understanding of what the Triton unit can or can't do during a swimmer's race.

HOW IT WORKS

Step 1

The Triton unit tucks under the swimmer's cap and captures performance metrics based on the athlete's motion through the water.

Step 3

The coach analyzes the athlete's race data to provide post-race feedback.

Step 2

The device sends data to the coach's tablet on deck in real-time but DOES NOT communicate any information to the athlete as they race.

In reference to:

FINA's Swimming Rules section SW10.8

➤ TritonWear does not communicate any information to the swimmers during the race and thus **can't help with their speed, pace, buoyancy or endurance while they are racing.**
